DETAILED ACTION***Double Patenting***

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

1. Claims 1,2, 6, 8, 9, 11, 12 and 16 to 18 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1 to 16 of U.S. Patent No. 6,885,136. Although the conflicting claims are not identical, they are not patentably distinct from each other because pending claims disclose an iridium alloy for a spark plug electrode containing Rh, W and Zr in wt% ranges that are overlapping with patented claims. Note that the overlap in wt% ranges establishes a prima facie case of obviousness because it would be obvious for one skilled in the art to select the pending claimed alloy wt% ranges over the broader disclosure of the patented claims since patented claims teach the same utility.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1 to 5, 8 and 10 to 15, and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Japanese patent 406112261 (hereinafter JP'261), US Patent application publication 2002/0003389 (hereinafter Ishiguro), or US Patent 6,885,135 (hereinafter Kanao).

4. Claims 1 to 18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Japanese patent 2002-327266 (hereinafter JP'266) or Japanese patent 10-259435 (hereinafter JP'435).

5. The English abstract of JP'261, JP'266 or JP'435, or Ishiguro in claims 15 and 16 on page 6, and Kanao in claim 10 of column 21, each discloses an iridium alloy having a composition with alloying constituents whose wt% ranges overlap those recited by the claims; such overlap in wt% ranges establishes a prima facie case of obviousness because it would be obvious for one skilled in the art to select the claimed alloy wt% ranges over the broader disclosure of the prior art since the prior art teaches the same utility, see MPEP 2144.05.
